

The air is warming, the snow is melting and the trees are budding. This means it's time for spring cleaning, yard work, home repairs and new exercise regimens ... all of which can present a variety of health and safety hazards. Your organization is often called upon to respond when problems occur, which provides an excellent opportunity to educate your community about spring safety and gain some solid public relations points in the process.

Below and on the reverse side is an adaptable press release featuring a variety of spring safety tips. You can re-type it or download it at www.vfis.com and place it on your organization letterhead. You may also wish to add tips specific to your area. Simply insert your local information in the areas indicated in brackets and mail the news release to the health or feature editor at your local newspaper as well as the news producers at television and radio stations in your area. Better yet, call them to find out the appropriate person to receive the release. You may even wish to offer your health and safety officer for interviews.

Spring is Here!

Offers Spring Safety Tips for the Community

With warmer weather and longer days approaching, people in [] are emerging from their winter cocoons to focus on long-neglected projects like spring cleaning, home repairs and yard work. Many are also lacing up their shoes for their first outdoor walk or jog of the season. These activities can be extremely beneficial, but they also involve a variety of health and safety hazards that can be avoided with the proper precautions. To help ensure everyone in our community stays safe this season, the members of [] offer the following tips and suggest you post them where they can be seen by your family members and co-workers.

CLEANING FOR SAFETY

Nature is undergoing a fresh start and so are homeowners who are ready to clean up the debris that has been accumulating in basements, storage sheds and garages over the winter.

- Household and pool chemicals, paints and poisons should be properly marked and stored under lock and key, away from children's reach. Dispose of any that are leaking, expired or that look bad.
- When cleaning up hazardous chemicals wear rubber gloves and follow the safety directions on the packaging. Never mix chemicals in the same container. If you don't know how to dispose of them, seek outside advice. Never put them into the trash or pour them down the drain.
- Make sure gasoline and cleaning fluids are well marked and stored in a cool, dry place away from the house and out of the reach of children and pets. Use only approved containers for gasoline storage.
- Never use gasoline to clean skin, clothes, auto parts or floors.
- Clean up work areas. Put dangerous tools, adhesives, matches or other work items away from children's reach.
- Check your barbecue grill for leaks and cracks and be sure to store any propane tanks away from your house and garage.
- Remove all fire hazards, including stacks of rags, newspapers and magazines. Pay special attention to the spaces around your furnace, hot water tank, fireplace, space heaters and dryer, as well as under the stairs.

Press Release: Spring Safety Tips, continued

YARDWORK SAFETY

Itching to get the yard into shape for the summer? Here are ways to help ensure your spring spruce-up is disaster-free.

- Limber up. Yard chores may seem easy, but they involve muscles you probably haven't used in a while.
- Always wear protective clothing when you handle pesticides and fertilizers.
- More than 75,000 people are injured in lawn mowing accidents each year. 10,000 of them are children.
 - ✓ Read and follow the manufacturer's instructions for safe operation.
 - ✓ Pick up or rake stones and loose debris before mowing to help prevent them from being launched into the air.
 - ✓ Wear sturdy shoes while mowing. Do not wear sandals.
 - ✓ Wear eye and hearing protection.
 - ✓ Always start and refuel mowers outdoors.
 - ✓ When refueling your mower, make sure the engine is off and cool. Don't spill gasoline on a hot engine — and *don't* smoke while pouring gasoline.
- Lawn trimmers, edgers, pruners and power saws also contribute to injuries and death each year.
 - ✓ Read and follow the manufacturer's instructions for safe operation.
 - ✓ Inspect the tool for damage. Do NOT use it if there are problems.
 - ✓ Use proper eye protection.
 - ✓ Make sure blade guards are in place on all cutting equipment.
 - ✓ Unplug all tools when not in use.
 - ✓ Make sure the tool is in the "off" position before you plug it in.
 - ✓ Store gasoline-powered equipment away from potential ignition sources (i.e. pilot light).
 - ✓ Make sure you use the right tool for the task at hand.
 - ✓ When pruning trees, be careful not to let metal ladders or trimmers contact overhead wires.
- Before you do any hands on weed removal:
 - ✓ Make sure you know how to identify poison ivy, sumac, oak and similar toxic plants.
 - ✓ Find out ahead of time how to treat the rashes they cause to reduce the irritation.

OUTDOOR SAFETY

Ready for some outdoor exercise and adventure? Here are a few pointers.

- Winter's inactive muscles can take only so much strain. Don't overdo it — build up slowly to help avoid strains that can put you out of commission for some time.
- It may look appealing, but don't wander on frozen rivers and lakes in the spring. The ice is beginning to thaw and you never know just how thin the ice really is.
- Spring's extra rain and thawing snow can cause normally safe rivers, streams and creeks to turn treacherous. Even standing on banks can be risky as they can be undercut by rushing water and give in under your weight.
- Springtime is also severe weather time. If the skies look threatening, check to see

if a storm watch or warning has been issued before you initiate outdoor activities. If you're already outside and thunderstorms threaten, go immediately into a building or enclosed vehicle. For tornadoes, go to the nearest safe structure or the basement or an interior first-floor room of your home. If there's no time to follow these precautions, take cover in a ditch or depression in the ground.

LADDER SAFETY

Ready to do some home repairs? More than 90,000 people visit the emergency room each year, because of ladder mishaps. Here are a few safety tips:

- Read the manufacturer's instructions that come with your ladder. They contain guidelines for weight and height limits as well as for the proper use of their product.
- Inspect the ladder before using it to make sure there are no loose or broken rungs.
- Make sure the ladder is the right height for the job. Many accidents happen when people overextend their reach because their ladders are too short.
- Never stand on a ladder's bucket shelf.
- Make sure the ladder is completely open and that all of its feet are planted on a firm, level surface. Extension ladders should not be placed at an angle that is too extreme.
- Avoid using a metal ladder near electrical sources.
- Face the ladder when climbing and descending.
- Keep weight centered between the two rails.
- Maintain three points of contact with the ladder while climbing. Half of all ladder related accidents were due to individuals carrying items as they climbed.

“These are just a few of the safety precaution to consider during the spring,” says _____ of _____
“It’s also a great time to replace your smoke detector batteries, make sure your fire extinguishers are placed in proper locations around your home and ensure you have a working flashlight and battery-powered radio for spring storms. By taking the right precautions when warmer weather beckons, you and those around you can enjoy a safer, healthier spring.”
